Choate Rosemary Hall Summer Programs Reports
SUMMER 2024

Aadya Agarwal **Workshop I**

Carol Taylor, Adviser

During this first session, Tenney House was made up of over 30 middle school girls! Students came from locations ranging from New York, California, and Canada all the way to Hong Kong, South Korea, and China. Although they may have come from different places, they had a shared experience of calling Tenney House home over the last two weeks. From Mug Nights with icebreakers, to karaoke night in St. John's Hall, it has truly been a privilege to see how everyone came together to bond under one shared roof. In addition to its long history of academic excellence, Choate Summer's boarding experience provides opportunities for students from all backgrounds to come together and to forge friendships that will last long after they leave campus. We are grateful to have had the opportunity to get to know your child over the course of their time here and look forward to the potential of seeing them again in the future.

Aadya felt nervous and scared upon coming to Choate but did a fantastic job of leaning into the unknown. During her time here, she became significantly more independent and made lots of new friends. She learned a lot in her biologist's world workshop and really enjoyed participating in the newspaper. She maintained contact with her family at home and stayed connected to both old and new friends. She stayed calm during stressful moments and learned how to reach out to others for support during these times. She explored lots of new things and new people and is now open to exploring more in the future. She has the world at her fingertips and has grown in confidence and her ability to achieve anything she sets her mind to. I wish her the best in all future endeavors.

Elizabeth De Leon, Instructor

A Biologist's World

Final Rating: Honors

Aadya, your inquisitive nature was a delight in the Biologist's World Workshop! Throughout the course, from the biosphere's interconnected systems to life's molecular building blocks, your thoughtful questions during breaks showcased a deep desire to understand biology. This was further evident in your meticulously detailed lab notes with helpful diagrams, which enhanced your work's clarity. Your attention to detail shone through during the final assessment, where your rich, detailed answers earned you top marks.

You also excelled in teamwork. Throughout the workshop, your strong communication skills with teachers and peers allowed you to complete projects, create accurate models, and ultimately present a well-constructed PowerPoint on Echinoderms. This presentation effectively conveyed their role in animal evolution to your classmates.

One area for continued development is achieving conciseness in your writing while maintaining the same level of detail. However, your work over the past two weeks demonstrates progress in this area. Your kindness and respect for peers and teachers were a pleasure to experience throughout the workshop.

We wish you a wonderful summer and the best of luck in the coming school year!
